

CUBE FIXTURES

Most Cube fixtures under 6.0" are made from billet tooling plate. These Cubes shown range from 3.0" to 5.0" and are for testing automotive ignition components.

The Standard Fabricated Cube fixture is 14.0" with a 2.0"x2.0" grid pattern of stainless steel threaded inserts for specimen attachments.

Shown above is a standard 13.0" Cast Cube fixture. Cast Cubes offer excellent performance and minimum weight.
